Amphenol Precision Optics' position on the extension of EU RoHS exemption 6c

As a leading supplier of high-quality, high-performance interconnect solutions and precision components, Amphenol Precision Optics is fully committed to ensuring its products comply with all applicable market regulations and guidelines.

In accordance with exemption 6c of Annex III of the RoHS 2 Directive 2011/65/EU, our products are exempt from the use of lead as an alloying element in copper up to a concentration of 4%.

On September 8th, 2025, the European Commission published Commission Delegated Directive C/2025/5961 final, amending Annex III and extending this exemption **until June 30th, 2027**.

Amphenol Precision Optics has begun implementing alternative solutions. These are low-lead (max. 0.1%) alloys that will comply with the 6c exemption of the RoHS 2 Directive after it expires. Close cooperation with our suppliers throughout the entire life cycle of our products enables Amphenol Precision Optics to meet the uncompromising quality requirements of the entire value chain.

Amphenol Precision Optics already offers lead-free products to selected customers upon request. This enables them to reduce health and environmental risks without compromising performance, while ensuring full compatibility with their existing solutions.
